

## What conditions are treatable with AmDrop™?

AmDrop™ Human Amniotic Liquid Allografts, especially when combined with AmDisk™ Human Amniotic Membrane Disk Grafts (comprised of the inner lining of the placental wall) with temporary contact lens, represent that latest treatment regimen to assist in resolving ocular surface diseases and disorders. The two most prevalent of these conditions are Keratoconjunctivitis sicca (dry eye) and recurrent corneal erosions, (a disorder of the outer layer of the cells of the cornea).

## What clinical benefits have been shown with AmDrop™?

AmDrop™ has been shown to reduce inflammation, promote healing, and enhance comfort. For several decades, doctors throughout the world have used amniotic liquid and membrane allografts to treat a variety of disorders and conditions that affect all areas of the human body.

## Your Eye Health Practitioner Is Your Best Source Of Information.

Any questions or concerns you may have about your procedure and the new AmDrop™ regenerative technology can best be answered by your doctor.

You can help insure the best outcome for your procedure.

# Your eye health clinician is recommending the use of AmDrop™ Amniotic Fluid to treat your ocular surface condition.

## What is AmDrop™ ?

AmDrop™ Regenerative Ocular Surface Therapy is a biological liquid allograft composed of human amniotic fluid used by health practitioners (Orthopedic, Spine, Dentist, Uro/GYN, Wound Care Specialists etc.) for a host of conditions for over the past 25 years and repair today more sustainably, safer and better performing at costs that are manageable.

## What is Human Amniotic Fluid?

AmDrop™ Human Amniotic Liquid Allograft is derived from planned C-Sections. The natural function of the amniotic fluid is to provide a protective and nurturing environment for the baby to safely develop and grow. Amniotic fluid is a rich source of growth factors, cytokines and biological properties that promote healing and pain management.

## What happens to the tissue over time?

The AmDrop™ Liquid Allografts activate your own progenitor cells to aid in regenerating, renewing, repairing and restoring the ocular surface. Essentially, AmDrop™ Regenerative Therapy Ocular Surface Drops promote the natural healing process.

## Is AmDrop™ comfortable?

Yes. The major advantage of the AmDrop™ technology is its rich protein profile, which includes not only anti-inflammatory and anti-scarring markers, but also bio-components that act to reduce pain. The ultimate goal in employing the use of AmDrop™ is to enable patients to maintain comfortable, functional, high-quality lifestyles.

## Is AmDrop™ safe?

Yes. The safety and quality of each AmDrop™ is carefully controlled. Each and every AmDrop™ graft provided to health practitioners follows stringent 2020 FDA regulations and requirements.
