AmDrop™ Description

AmDrop™ is an liquid allograft derived from the amniotic fluid within the placenta. It has been terminally sterilized, leaving only a high concentration of abundant growth factors and cytokines associated with soft tissue repair, replacement, and rejuvenation.

Use Cases*

AmDrop™ BabyFace Facial Kit can be used in a wide array of cases such as:

- Microneedling
- Facial Rejuvenation
- Post Laser Skin Resurfacing Treatments
- Hair Restoration
- Non-Surgical Face lift

The AmDrop™ liquid allograft is composed of collagens and important regenerative proteins, including the growth factors and cytokines associated with anti-inflammation (IL-10, IL-1RA), antimicrobial protection (MPO), and angiogenesis (b-FGF, ANG-2, VEGF), which when introduced to the skin initiates a response for soft tissue rejuvenation.

*The tools provided in the AmDrop™ Aesthetics Kit are to be utilized by a licensed provider

The AmDrop™ BabyFace Facial Kit is a unique combination of world-class biologics used in conjunction with many regenerative treatments in med spas and plastic surgery settings.

Our kit is designed to provide Aesthetic practitioners with a carefully selected array of components which facilitate fast and complete recovery following many aesthetic procedures including micro-needling, scar removal, and laser skin resurfacing.

The AmDrop™ BabyFace Facial Kit includes our AmDrop™ pure liquid allograft fluid, a professional grade hydra-needle by Integrity, Hyaluronic Acid, and a unique 3D Hyaluronic Acid Mask.

AmDrop™ liquid allograft can be combined with hyaluronic acid, sterile saline, sterile water or PRP, and applied during the BabyFace Facial, micro-needling and scar-removal treatments or immediately following laser skin resurfacing procedures. The key growth factors associated with anti-inflammation react immediately to reduce the inflammation usually associated with these therapeutic treatments.

Our professional grade hydra-needle from Integrity is another highly-utilized resource that will accept a combined total of 3 cc's of AmDrop™ pure liquid allograft and any selected fluid medium. The hydra-needle provides an even and consistent application of the fluid onto the face, neck, chest or hands.

The unique 3D Sculptured Hyaluronic mask is to perfectly fit around the facial contours, jawline and neck, along with innovative loops that fits onto the ears, allowing the user to sit up and enjoy some 'me time', while the skin is being drenched with pure hydrating Hyaluronic Acid and stimulating collagen building copper peptides. Leaves skin feeling softer, more hydrated and visibly lifted defined jaw line and younger looking skin.

Some of the performance ingredients in the mask are: HylaFuse (3 sized molecular weight of HA to enhance skin penetration to optimal skin levels), Zinc, Pro B5, Copper Peptides, Mineral Ore Ferment, Willow Bark.
